

Marcus Wiseman

Senior Frontend Engineer · Vue.js · Nuxt · TypeScript

md.wiseman@hotmail.com · linkedin.com/in/marcus-wiseman · github.com/MarcusWiseman7 · Asturias, Spain · Remote (EU)

PROFILE

Senior frontend engineer with more than ten years shipping production web applications, the last several focused on Vue and Nuxt at scale. At Santévet, a multinational pet insurance group, I own the frontend of the main sales funnel — a brand- and country-agnostic codebase of roughly 30,000 lines serving five European markets and three French brands — and have led it through two major framework migrations: Nuxt 2 to Nuxt 3 with a JavaScript-to-TypeScript conversion, then off Nuxt to a standalone Vue application when Nuxt 4 changed the calculus.

My strengths are modernizing legacy Vue codebases, frontend architecture that has to hold up across multiple brands and markets, and the unglamorous work — monitoring, code quality, CI/CD — that lets a team move quickly without shipping regressions. American, based in Spain, working remotely across EU time zones.

TECHNICAL SKILLS

Frontend: Vue 3 (Composition API) and Vue 2, Nuxt 4 / 3 / 2, TypeScript, JavaScript (ES6+), Svelte & SvelteKit, SCSS, Vuetify, design systems & monorepo component libraries

Backend: Node.js, Express, MongoDB, REST API design

Cloud & Auth: AWS Amplify Auth

Quality & Monitoring: Datadog, SonarQube, Botify

Tooling & Delivery: Git, GitLab CI/CD, Git Flow

Focus areas: Legacy migrations, white-label & multi-locale architecture, i18n, PWAs, performance, SEO

EXPERIENCE

Senior Frontend Vue Developer | Santévet

March 2023 – Present · Lyon, France (remote)

- Own the frontend of the group's primary sales funnel: a brand- and country-agnostic application serving five European markets and all three of the group's French brands from a single codebase — roughly 331 Vue, TypeScript, and test files and 30,000 lines of code.
- Designed and implemented the white-label architecture behind it, so brand identity and locale are configuration rather than forked codebases.
- Led the migration of the funnel and main website from Nuxt 2 / Nuxt Bridge to Nuxt 3, and from JavaScript to TypeScript, improving both runtime performance and long-term maintainability.
- Managed the subsequent migration off Nuxt to a standalone Vue application following the Nuxt 4 release, taking the project through the transition end to end without disrupting a live revenue-generating funnel.
- Contribute to the company's internal design system — a monorepo component library consumed across the group's frontends — and integrated it into the funnel.
- Built a secure user authentication application on AWS Amplify Auth to manage access across products.
- Instrumented the products with Datadog for behavioral monitoring and analytics, and held code quality through SonarQube and GitLab CI/CD.

Freelance Web Developer | Self-employed

June 2015 – Present · Remote (EU)

- Deliver full-stack JavaScript projects for individuals, startups, and corporate clients across Europe, frequently running two or more engagements in parallel.
- Frontend in Vue / Nuxt and Svelte / SvelteKit; REST APIs in Node.js and Express; data in MongoDB.
- Own projects end to end — scoping, architecture, build, deployment, and direct client communication in English.

Frontend Developer — Vue / Nuxt / SCSS | SimplyDigital

June 2020 – April 2024 · Prague, Czechia · Concurrent with Santévet from 2023

- Built and maintained client-facing interfaces in Vue.js, Nuxt, and SCSS, with a focus on responsive, accessible UI.
- Worked alongside designers, backend developers, and project managers to take digital projects from concept to launch on schedule.

Co-Founder & Full-Stack JavaScript Developer | Wiseman & Jech s.r.o.

March 2018 – March 2021 · Prague, Czechia

- Co-founded a software development firm and ran project delivery, client relationships, and new business.
- Led AgileTeams.io, the company's flagship product, from concept through to launch.
- Built web applications, PWAs, and websites end to end using Vue.js, Nuxt.js, Node.js, Express, MongoDB, and Vuetify.
- Sourced and hired freelance specialists and assembled teams around each project's needs.

Frontend Developer — Social Network PWA | Stibo Media s.r.o.

July 2019 – June 2020 · Prague, Czechia

- Led frontend development of a progressive web app for a social network platform, built in Vue.js and SCSS.
- Shipped live chat, video chat, e-commerce, and dynamic post interactions.
- Built a component-based UI with close attention to responsiveness, performance, and frontend best practice.
